

Bring your hybrid work vision to life

Realize the full value of a flexible workforce with Cisco's complete solution portfolio

5 questions to answer for hybrid work success

1. Which employee personas are best suited for remote versus office-based work?
2. Does my meeting room strategy and technologies support new hybrid office dynamics?
3. Am I empowering employees to be productive from any location?
4. Are employees safe at the office?
5. Can my network support open floor plans and provide secure connectivity from anywhere?

Enabling seamless, secure and connected workforce experiences

IT leaders face several obstacles as they attempt to bring their hybrid work vision to life, from connectivity to inclusive meetings to efficient collaboration and access.

To further complicate matters, these issues can't be addressed in silos. Instead, they require vast experience, expertise and coordination across multiple technology domains to deliver an optimal hybrid work experience.

Together, World Wide Technology and Cisco can help you recover, adjust and thrive in a new era of flexible work.

WWT is a global technology solutions provider with more than 30 years of experience partnering with leading technology manufacturers, cloud providers and Fortune 100 companies. When we combine our strategic consulting expertise and ability to execute complex IT deployments with Cisco's hybrid work solutions, we're able to help organizations:

Improve the employee experience

Optimize licensing and reduce costs

Accelerate time to market and digital transformations

Gain better visibility into environments

Rationalize and streamline toolsets

Remain secure and compliant

Cisco solutions for long-term hybrid work

Cisco's hybrid work solutions are designed to help you overcome the complex challenges of flexible working. When used together in an integrated approach, IT leaders can maximize value for their organizations and reach their hybrid work goals faster.

Advantages of a unified approach

- Reduced costs through consolidated enterprise agreements (EAs)
- Streamlined support processes for faster resolution
- Requires less IT resources and specialization for ongoing operations
- Enable seamless interoperability for an optimal experience

Get started by exploring these four key areas:

Collaboration

It's important to enable consistent collaboration experiences both digitally and in person. This means reimagining the office as a destination for highly collaborative work, events and company culture, as well as creating a seamless videoconferencing experience.

To get started, equip your spaces with the right technologies, such as Webex Boards, Room Kits and Room Bars, for high-quality video and audio, digital whiteboarding and room scheduling. Then identify opportunities for videoconferencing interoperability to streamline the employee experience.

Networking

Today's hybrid workforce is extremely dynamic, placing new demands on the network. Offices must be prepared for an increase in bandwidth-intensive video meetings, more mobile devices and employees working fluidly throughout spaces.

To get started, understand your mix of office-based versus remote employees, anticipated workflows, traffic patterns and any special considerations. From there, you can make informed decisions about modernizing your network and implementing global connectivity solutions like Cisco SD-WAN and SASE.

Security

A hybrid work model introduces a wider attack surface, making it more difficult to protect valuable data while providing employees with seamless access to the information they need.

To get started, evaluate the threat landscape of your organization's network to identify existing and potential vulnerabilities. From there, you can explore how security approaches, like zero trust, as well as solutions like Cisco Duo for multi-factor authentication can help protect your organization.

Visibility and Analytics

Without a compelling employee experience, organizations risk losing their best talent. Visibility and analytics tools can help IT leaders monitor and measure the entire hybrid work experience to proactively identify issues and make improvements.

Solutions like ThousandEyes, Cisco DNA Spaces and AppDynamics provide visibility into your network, building spaces and applications. This allows you to capture a holistic view of your experience, remediate issues quickly, and intelligently plan for the future.
